

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Filing Date: January 15, 2004

Title: MILLIMETER WAVE AREA-PROTECTION SYSTEM AND METHOD

Page 2

Dkt: PD-02W167

### IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) An area-protection system comprising:

sensors to detect an intruder within a protected area;

an active-array antenna to generate a high-power millimeter-wave wavefront to deter the  
an intruder when detected within the a protected area; and

one or more reflectors positioned within the protected area to help retain energy of the  
wavefront within the area,

wherein the active-array antenna comprises a plurality of ~~active-array elements~~  
semiconductor wafers arranged together on a substantially flat surface, each semiconductor  
wafer active-array element including a power amplifier and a transmit antenna which together  
generate the high-power millimeter-wave wavefront.

2. (Previously Amended) An area-protection system comprising:

an active-array antenna to generate a high-power millimeter-wave wavefront to deter an  
intruder within a protected area;

one or more reflectors positioned within the protected area to help retain energy of the  
wavefront within the area; and

an intrusion-detection subsystem to detect a presence of the intruder within the protected  
area and generate a detection signal for the active-array antenna,

wherein the active-array antenna is to generate the high-power millimeter-wave  
wavefront in response to the detection signal, and

wherein the high-power wavefront is to increase a skin temperature of the intruder to  
deter the intruder.

3. (Currently Amended) The system of claim 2 wherein the intrusion-detection subsystem  
is to detect the presence of a tag worn by the intruder and is to instruct the active-array antenna  
to refrain from generating the wavefront when the tag is authenticated.

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Filing Date: January 15, 2004

Title: MILLIMETER-WAVE AREA-PROTECTION SYSTEM AND METHOD

Page 3

Dkt: PD-02W167

4. (Original) The system of claim 2 wherein the intrusion-detection subsystem includes an illuminator comprising one of an optical illuminator, a LASER illuminator, a sonic illuminator, an ultrasonic illuminator, or an RF/RADAR illuminator to transmit signals and detect intruder movement based on return signals.

5. (Currently Amended) The system of claim 1 wherein the one or more reflectors are positioned to increase an energy density of the wavefront in a predetermined location of the protected area.

6. (Currently Amended) The system of claim 1 wherein ~~the plurality of active array elements comprises a plurality of semiconductor wafers arranged together on a substantially flat surface, wherein each semiconductor wafer comprises one or more of the power amplifiers and the transmit antenna to generate the high-power~~ millimeter-wave wavefront generated by the plurality of semiconductor wafers is a coherent wavefront.

7. (Currently Amended) An area-protection system comprising:  
an intrusion-detection subsystem to detect presence of an intruder; and  
an intrusion-inhibiting subsystem comprising an active-array antenna to provide a high-power millimeter-wave wavefront in response to the detection of the intruder, the high-power millimeter-wave wavefront to deter the intruder,

wherein the active-array antenna comprises a plurality of ~~active array elements~~ semiconductor wafers arranged together on a surface, each semiconductor wafer active array element including a power amplifier and a transmit antenna which together generate the high-power millimeter-wave wavefront.

8. (Previously Amended) An area-protection system comprising:  
an intrusion-detection subsystem to detect presence of an intruder; and

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Filing Date: January 15, 2004

Title: MILLIMETER-WAVE AREA-PROTECTION SYSTEM AND METHOD

Page 4

Dkt: PD-02W167

an intrusion-inhibiting subsystem comprising one of either an active-array antenna or a passive reflect-array antenna to provide a high-power millimeter-wave wavefront in response to the detection of the intruder to deter the intruder,

wherein the high-power wavefront increases a skin temperature of the intruder, and

wherein the system further comprises a thermal-sensing subsystem to measure the skin temperature and to generate a control signal for the intrusion-inhibiting subsystem to maintain the skin temperature either within a predetermined temperature range or below a predetermined temperature.

9. (Currently Amended) The system of claim 8 wherein when the system includes the active-array antenna, the active-array antenna ~~to~~ generates a continuous-wave wavefront, and

wherein the intrusion-inhibiting subsystem further comprises a system controller to reduce a transmit power level of the wavefront in response to the control signal from the thermal-sensing subsystem to maintain the skin temperature either within the predetermined temperature range or below the predetermined temperature.

10. (Currently Amended) The system of claim 9 wherein ~~when the system includes the active array antenna, and~~

~~wherein the intrusion-inhibiting subsystem further comprises a system controller to~~ reduces one of either a pulse-repetition-rate or a pulse-duration time of the wavefront in response to the control signal to maintain the skin temperature either within the predetermined temperature range or below the predetermined temperature.

11. (Currently Amended) The system of claim 7 wherein the intrusion-detection subsystem includes an intruder tracker to track movement of the intruder and to generate a tracking-control signal for the array antenna, and

wherein the intrusion-inhibiting subsystem further comprises a beam director to configure the array antenna to direct the high-power millimeter-wave wavefront toward the intruder to deter the intruder in response to the tracking-control signal.

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Page 5  
Dkt: PD-02W167

12. (Previously Amended) An area-protection system comprising:  
an intrusion-detection subsystem to detect presence of an intruder; and  
an intrusion-inhibiting subsystem comprising one of either an active-array antenna or a passive reflect-array antenna to provide a high-power millimeter-wave wavefront in response to the detection of the intruder to deter the intruder,

wherein the intrusion-detection subsystem includes a biometric lock to determine whether the intruder is one or either a biological entity or a non-biological entity, the intrusion-detection subsystem to generate a biological-identification signal when a biological entity is detected,

wherein the intrusion-inhibiting subsystem generates the high-power wavefront in response to the biological-identification signal, and

wherein the intrusion-inhibiting subsystem refrains from generating the high-power wavefront when a non-biological entity is detected.

13. (Original) The system of claim 12 wherein the intrusion-detection subsystem further comprises a biometric tracker to further track movement of a detected biological entity and to generate a biological-entity tracking-control signal for the intrusion-inhibiting subsystem, the intrusion-inhibiting subsystem to direct the wavefront toward the biological entity in response to the biological-entity tracking-control signal.

14. (Currently Amended) An area-protection system comprising:  
an intrusion-detection subsystem to detect presence of an intruder; and  
an intrusion-inhibiting subsystem comprising a passive reflect-array antenna to provide a high-power millimeter-wave wavefront in response to the detection of the intruder to deter the intruder,

wherein the passive reflect-array antenna comprises a plurality of semiconductor wafers arranged on an at least partially parabolic surface ~~passive antenna elements~~ to reflect ~~an a~~ spatially-fed incident millimeter-wave signal to generate the high-power millimeter-wave wavefront,

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Filing Date: January 15, 2004

Title: MILLIMETER-WAVE AREA-PROTECTION SYSTEM AND METHOD

Page 6

Dkt: PD-02W167

wherein each semiconductor wave comprises a receive antenna coupled to a transmit antenna to respectively receive and retransmit the spatially-fed incident millimeter-wave signals, and

wherein the receive and transmit antennas have orthogonal polarizations.

15. (Previously Amended) The system of claim 7 wherein the intrusion-detection subsystem includes an illuminator to detect the intruder based on movement, and

wherein the illuminator is an active illuminator comprising one of an optical illuminator, a LASER illuminator, a sonic illuminator, an ultrasonic illuminator, or an RADAR illuminator which transmits signals and detects intruder movement based on return signals.

16. (Currently Amended) An area-protection system comprising:

an intrusion-detection subsystem to detect presence of an intruder; and

an intrusion-inhibiting subsystem comprising one of either an active-array antenna or a passive reflect-array antenna to provide a high-power millimeter-wave wavefront in response to the detection of the intruder to deter the intruder,

wherein the intrusion-detection subsystem is to detect the presence of a tag worn by the intruder,

wherein the intrusion-detection subsystem instructs the intrusion-inhibiting subsystem to refrain from generating the wavefront when the tag is authenticated by the intrusion-detection subsystem.

17. (Currently Amended) The system of claim 7 wherein the intrusion-detection subsystem comprises a passive detection subsystem ~~comprises~~ comprising one of an infrared (IR) sensor, an optical sensor, a sonic sensor or an ultrasonic sensor to detect the presence of the intruder.

18. (Currently Amended) The system of claim 7 wherein ~~array antenna comprises a plurality of semiconductor wafers arranged together, wherein each semiconductor wafer comprises:~~

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Filing Date: January 15, 2004

Title: MILLIMETER-WAVE AREA-PROTECTION SYSTEM AND METHOD

Page 7

Dkt: PD-02W167

~~one or more sets of power amplifiers to amplify the millimeter-wave frequency; and~~  
~~one or more transmit antennas to generate the high-power millimeter-wave wavefront~~  
~~generated by the plurality of semiconductor wafers is a coherent wavefront, wherein each set of~~  
~~power amplifiers is associated with one of the transmit antennas.~~

19. (Currently Amended) The system of claim 18 7 wherein the active-array antenna is to receive a spatially-fed millimeter-wave lower-power wavefront and is to amplify the lower-power wavefront to generate the high-power wavefront,

wherein each semiconductor wafer further includes a receive antenna to receive millimeter-wave signals of the spatially-fed millimeter-wave lower-power wavefront for subsequent amplification by the power amplifier and transmission by the transmit antenna of an associated semiconductor wafer.

20. (Currently Amended) The system of claim 19 wherein the active-array antenna further comprises a passive reflector to reflect a millimeter-wave frequency signal from a feed and provide the lower-power wavefront for incident on an active reflect-array comprising the plurality of semiconductor wafers,

wherein the plurality of semiconductor wafers is arranged on an at least partially parabolic surface, and

wherein the receive and transmit antennas have orthogonal polarizations.

21. (Currently Amended) The system of claim 19 7 wherein the plurality of semiconductor wafers is arranged on a substantially flat surface.

22. (Currently Amended) A method of protecting an area comprising:

detecting a presence of an intruder; and

generating a high-power millimeter-wave wavefront with one of either an active-array antenna or a passive reflect-array antenna in response to the detection of the intruder to deter the intruder,

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Filing Date: January 15, 2004

Title: MILLIMETER-WAVE AREA-PROTECTION SYSTEM AND METHOD

Page 8

Dkt: PD-02W167

wherein when the generating is performed with an active-array antenna, the method comprises generating the wavefront with a plurality of ~~active-array elements~~ semiconductor wafers arranged together on a surface, each semiconductor wafer ~~active-array element~~ including a power amplifier and a transmit antenna which together generate the high-power millimeter-wave wavefront, and

wherein when the generating is performed with a passive reflect-array antenna, the method comprises generating the wavefront with a plurality of passive antenna elements by receiving and retransmitting an incident millimeter-wave signal.

23. (Previously Amended) A method of protecting an area comprising:

detecting a presence of an intruder;

generating a high-power millimeter-wave wavefront with one of either an active-array antenna or a passive reflect-array antenna in response to the detection of the intruder to deter the intruder;

increasing a skin temperature of the intruder with the high-power millimeter-wave wavefront;

measuring the skin temperature; and

generating a control signal to maintain the skin temperature either within a predetermined temperature range or below a predetermined temperature.

24. (Original) The method of claim 23 further comprising reducing a transmit power level of the wavefront in response to the control signal to maintain the skin temperature either within the predetermined temperature range or below the predetermined temperature.

25. (Original) The method of claim 23 further comprising reducing one of either a pulse-repetition-rate or a pulse-duration time of the wavefront in response to the control signal to maintain the skin temperature either within the predetermined temperature range or below the predetermined temperature.

26. (Original) The method of claim 22 further comprising:

AMENDMENT UNDER 37 C.F.R. 1.116

Serial Number: 10/758,334

Filing Date: January 15, 2004

Title: MILLIMETER-WAVE AREA-PROTECTION SYSTEM AND METHOD

Page 9

Dkt: PD-02W167

tracking movement of the intruder and to generate a tracking-control signal for the array antenna; and

configuring the array antenna to direct the wavefront toward the intruder in response to the tracking-control signal.

27. (Previously Amended) A method of protecting an area comprising:

detecting a presence of an intruder;

generating a high-power millimeter-wave wavefront with one of either an active-array antenna or a passive reflect-array antenna in response to the detection of the intruder to deter the intruder;

detecting a presence of a tag worn by the intruder;

authenticating the tag; and

refraining from generating the wavefront when tag is authenticated.

28. (Original) The method of claim 22 wherein detecting comprises illuminating an area with an active illuminator comprising one of an optical illuminator, a LASER illuminator, a sonic illuminator, an ultrasonic illuminator, or an RF/RADAR illuminator which transmits signals to detect the intruder based on return signals.

29. (Currently Amended) The method of claim 22 wherein the passive reflect-array antenna comprises a plurality of passive semiconductor wafers arranged together, each passive semiconductor wafer comprising a receive antenna coupled with a transmit antenna, the receive antennas to receive a spatially fed incident millimeter-wave signal for retransmission by the transmit antennas to provide the high-power millimeter-wave wavefront. ~~wherein the method further comprises:~~

~~amplifying the millimeter-wave frequency with one or more sets of power amplifiers on the semiconductor wafers; and~~

~~generating the high-power wavefront with one or more transmit antennas on the semiconductor wafers, wherein each set of power amplifiers is associated with one of the transmit antennas.~~
